

MAAZ ALI MATTEHALLI

Electrical & Electronics Engineer · NIT Goa | **Business Strategy & Product Analyst**

maazali059@gmail.com · +91 7776971531 · Goa, India · [Portfolio ↗](#) · [LinkedIn ↗](#)

PROFILE

EEE graduate who has **built and shipped hardware-software market-ready products from scratch**, not just theorised about them. Diagnosed live EV charging failures firsthand, reduced IoT sensor BOM cost by 75% while maintaining spec, authored product requirements for a MeitY national AI study. Looking for an energy/IoT product role where I can **own problems end-to-end**.

EDUCATION

NIT Goa (National Institute of Technology Goa)

B.Tech, Electrical & Electronics Engineering · 2026

Courses: Power systems · Embedded systems · Signal processing · PCB design · Control theory. Hardware labs, PCB fabrication, robotics workshops C++, Python, DSA, SQL, Soft Computing and ML.

Awarded 10/10 for B.Tech.Major Project for market-ready MVP

President - SPIE Student Chapter (International Society for Photonics and Optics) ·

2023-2025

Core Team & Marketing and Outreach Head – SAAVYAS (NITG Techno-Cultural Festival) ·

2024-2025

EXPERIENCE

Product & Service Delivery Intern @ **Athena Infonomics**

Sep 2025 – Present · 10 months

- ▶ Authored PRDs and KPI frameworks for a MeitY-commissioned national AI adoption study; translated multi-stakeholder inputs into prioritised feature requirements presented at the India AI Summit.
- ▶ Designed AI adoption roadmaps for MSMEs across pharma, electronics, textiles — identified top-3 friction points per sector, mapped to product opportunities.
- ▶ Cut user-research turnaround by ~60% via LLM-assisted synthesis: transcripts → tagged insights → action-ready product summaries.
- ▶ Built techno-financial ROI model for a water-utility infrastructure project (Lesotho LEWA); used directly in government stakeholder negotiations.

R&D Product Intern @ **Saafwater**

Jun 2024 – May 2025 · 12 months

- ▶ Owned full 0-to-1 lifecycle: hardware scoping → PCB design → firmware → MQTT IoT pipeline → ops dashboard. Built for field reliability, not lab conditions.
- ▶ Reduced BOM cost by 75% sourcing local alternatives validated against original performance spec ($\pm 8\%$ measurement accuracy maintained).
- ▶ Designed a real-time telemetry dashboard giving field operators single-pane view of sensor health and water quality across deployment sites.

PROOF OF WORK

EV

Statiq EV — Telemetry Audit & Product Fix · Physical-to-Digital · EV Infra

Firsthand audit → diagnosed "Ghost Availability" (OCCP handshake failures → stale availability states) as primary churn driver. Modelled ₹250–400 CPO margin loss per dropped session. Authored 3-phase recovery spec: Data Freshness UI + Heartbeat checks + Guided Fallback Routing.

OPS

Urban Company InstaHelp — Unit Economics Teardown · Marketplace · Ops

Proved 10-min SLA applied quick-commerce physics to human labour → negative contribution margins. Diagnosed FY26 paradox: 35.9% revenue growth alongside widening net losses. Proposed Demand Shaping (dynamic SLA discount windows) + B2B API density blitzing to restore unit viability.

SKILLS & DOMAIN

Product

PRD writing · KPI frameworks · User research · Feature scoping · Acceptance criteria · Roadmapping · 0-to-1 lifecycle

Domain

EV charging infra · OCCP · IoT telemetry · Energy systems · Physical-to-digital · MSME workflows

Technical

PCB design · Embedded systems · MQTT · Python · SQL · Figma · LLM-assisted workflows

Tools

Notion · Jira · Figma · Google Sheets · Prompt engineering · Asana · Cross-functional coordination

Actively seeking EV / Energy / IoT product roles · Open to relocate anywhere in India [View full portfolio →](#)
