SUMMARY

Data-driven Product Analyst and Electrical Engineer specializing in hardware-software integration, IoT telemetry, and EV infrastructure scaling. Proven track record of leveraging data to resolve edge cases, optimize Session Success Rates (SSR), and bridge physical hardware with intuitive digital platforms. Expert in translating complex user friction into scalable MVPs and technical product roadmaps to drive user retention and operational reliability.

CORE COMPETENCIES

Product Management: UX Analysis, KPI Identification, A/B Testing, User Journey Mapping, Total Cost of Ownership (TCO) Modeling, Go-to-Market (GTM) Strategy, Agile Workflows.

Technical & Data: SQL, IoT Telemetry (MQTT, NodeMCU), Data Visualization, Predictive ML Modeling, Embedded Systems architecture, AI Readiness Adoption.

Domain Expertise: EV Infrastructure, Hardware-to-Software Handshakes, Smart Grids, Session Reliability.

PROFESSIONAL EXPERIENCE

Athena Infonomics

Product Intern

Remote

Jan 2026 – Present

- Conducted product analysis and strategic mapping for enterprise tech adoption across 4 major industrial sectors, bridging hardware limitations and AI adoption lacking with end-user business requirements.
- Conducted technical edge-case UX/UI assessments to evaluate the AI deployment readiness of MSMEs for B2B clients.
- Designed scalable analytical frameworks for legacy manufacturing MSMEs, aligning complex regulatory workflows into 5+ actionable technical product roadmaps.
- Conducted Stakeholder Interviews and Industry Association Interviews to extract pain-points in the Valuechain.

Governance & Service Delivery Intern

Sep 2025 – Jan 2026

- Worked with government utilities and public-sector agencies to strengthen data systems, technical documentation, and service delivery workflows.
- Conducted market, policy, and institutional research to diagnose system-level challenges across electricity and water sectors.
- Supported energy and water-related data integration, ensuring accuracy across engineering specifications and datasets used by government partners.
- Engaged with international and government stakeholders to define technical requirements, clarify regulatory constraints, and co-develop operational solutions.

Saafwater

Hardware Product R&D Intern & B.Tech Major Project

Goa, India

Aug 2024 – Apr 2025

- Spearheaded the 0-to-1 lifecycle of an industrial monitoring MVP, integrating custom IoT telemetry to achieve real-time, zero-latency data sync.

- Optimised procurement strategy and agile component sourcing, achieving a 75% reduction in Bill of Materials (BOM) costs while maintaining $\pm 8\%$ hardware accuracy.
- Engineered data pipelines processing 100+ standard calibrations, utilising the output to train predictive analytical regression models for proactive hardware failure alerts.

TARGETED PRODUCT PROJECTS

Product Feasibility: EV Adoption for Commercial Fleets

May 2025 – Aug 2025

- Built a comprehensive Total Cost of Ownership (TCO) model analysing capex/opex and grid infrastructure, proving a 25% cost savings for commercial EV fleets.
- Examined energy consumption patterns, grid readiness, and charging network gaps, translating findings into actionable insights.
- Produced analytical briefs and recommendations informing government decision-making and investment planning.

Hyperspectral Crop Yield & Disease Detection Model

Jan 2025 – April 2025

- Trained ML models on 500+ infrared and hyperspectral images, achieving 85%+ accuracy in crop yield prediction.
- Integrated hyperspectral imaging techniques for early plant disease detection with a target accuracy above 90%.
- Conducted exploratory data analysis, spectral feature extraction, and imaging-to-ML mapping for agricultural insights.

LEADERSHIP & IMPACT

SPIE Student Chapter, NIT Goa — President

May 2023 – Jan 2025

- Rebuilt structural workflows for a dormant chapter, securing \$2,400+ in global grant funding and directing 6+ large-scale technical workshops for 400+ active users.

Saavyas, NIT Goa — Core Team and Marketing Head

Nov 2023 – Jul 2024

- Automated operational trackers and digital workflows to cut internal team communication lag times by 60%, successfully scaling the flagship event to 5,000+ attendees.
- Managed marketing operations and built cross-college partnerships, strengthening event visibility and network reach.

EDUCATION & CERTIFICATIONS

National Institute of Technology, Goa

2026

B.Tech. in Electrical and Electronics Engineering (EEE)

Aspire Institute — Aspire Leaders Program Fellow (Global Leadership & Strategy)

2026

McKinsey & Company — Forward Program

2025

Generative AI Mastermind — Practical AI/ML Applications for Strategic Insights

2025

10/10 B.Tech Project

Received for successful industry collaboration with Saafwater and development of a fully functional MVP adopted for field deployment.
